

2025-01-22 - TRAFFIC ANALYSIS EXERCISE: DOWNLOAD FROM FAKE SOFTWARE SITE

ASSOCIATED FILE:

- Zip archive of the pcap: **2025-01-22-traffic-analysis-exercise.pcap.zip** 20.5 MB (20,534,228 bytes)

NOTES:

- Zip files are password-protected. Of note, this site has a new password scheme. For the password, see the "about" page of this website.

BACKGROUND

You work as an analyst at a Security Operation Center (SOC). Someone contacts your team to report a coworker has downloaded a suspicious file after searching for Google Authenticator. The caller provides some information similar to social media posts at:

- https://www.linkedin.com/posts/unit42_2025-01-22-wednesday-a-malicious-ad-led-activity-7288213662329192450-ky3V/
- https://x.com/Unit42_Intel/status/1882448037030584611

Based on the caller's initial information, you confirm there was an infection. You retrieve a packet capture (pcap) of the associated traffic. Reviewing the traffic, you find several indicators matching details from a Github page referenced in the above social media posts. After confirming an infection happened, you begin writing an incident report.

LAN SEGMENT DETAILS FROM THE PCAP

- LAN segment range: **10.1.17[.]0/24** (10.1.17[.]0 through 10.1.17[.]255)
- Domain: **bluemoontuesday[.]com**
- Active Directory (AD) domain controller: **10.1.17[.]2 - WIN-GSH54QLW48D**
- AD environment name: **BLUEMOONTUESDAY**
- LAN segment gateway: **10.1.17[.]1**
- LAN segment broadcast address: **10.1.17[.]255**

TASK

For this exercise, answer the following questions for your incident report:

- What is the IP address of the infected Windows client?
- What is the mac address of the infected Windows client?
- What is the host name of the infected Windows client?
- What is the user account name from the infected Windows client?
- What is the likely domain name for the fake Google Authenticator page?
- What are the IP addresses used for C2 servers for this infection?

Task Final Answers

#	Question	Final Answer	Evidence / Notes
1	Infected Windows client IP	10.1.17.215	DNS و HTTP في كل الـ Source IP ظهر كـ requests
2	MAC address of infected client	00:d0:b7:26:4a:74	من Ethernet II Header
3	Hostname of infected Windows client	WIN-GSH54QLW48D	من Kerberos sname → WIN-GSH54QLW48D.bluemootuesday.com
4	User account name	shutchenson	من Kerberos cname → CNameString: shutchenson
5	Domain joined by the host	bluemootuesday.com	من Kerberos realm / sname
6	Fake website (Fake Google Authenticator)	http://5.252.153.241/1517096937	مباشر بدون IP إلى HTTP GET request دوميـن حقيقي
7	Command & Control (C2) IP/domain	5.252.153.241	من Conversation stats: 3100 packets, 1.4 MB, duration 3142 s — server sending large data
8	Description of malicious activity	The infected host 10.1.17.215 accessed a fake Google Authenticator page hosted on 5.252.153.241, then established long, continuous communication with the same IP (likely C2 connection).	Evidence: HTTP + Kerberos traffic + long TCP session (Stream 34)

1-Google Authenticator (1).pcap
