

Install and configure winlogbeat

1. Configuring Winlogbeat Output to Elasticsearch

The Winlogbeat configuration file (`winlogbeat.yml`) defines where and how the collected Windows event logs should be sent. The most common output is Elasticsearch.

Key configuration settings shown :

- `hosts`: Set to your Elasticsearch server IP and port (e.g., "`https://192.168.43.128:9200`")
- `protocol`: Use "`https`" for secure communication
- `username`: Set to "`elastic`"
- `password`: Enter the password you previously reset for the elastic user
- `pipeline`: Routes events to specific pipelines (security, sysmon, or PowerShell)

Note: The `api_key` or `username/password` authentication methods are mutually exclusive – use only one.

```
# Configure what output to use when sending the data collected by
the beat.

# ----- Elasticsearch
Output -----
#output.elasticsearch:
# Array of hosts to connect to.
#hosts: ["http://192.168.43.128:9200"]

# Protocol - either `http` (default) or `https`.
#protocol: "https"

# Authentication credentials - either API key or
username/password.
#api_key: "id:api_key"
username: "elastic"
password: "8Yqa+Cux4FPuf1VqcSlR"
#ssl.enabled: true
#ssl.verification_mode: none

# Pipeline to route events to security, sysmon, or powershell
pipelines.
pipeline: "winlogbeat-%[agent.version]-routing"

# ----- Logstash
Output -----
output.logstash:
```

2. Configuring Kibana for Winlogbeat Dashboards

Starting with Beats version 6.0.0, dashboards are loaded via the Kibana API. This section of the `winlogbeat.yml` file configures the connection to Kibana.

Configuration parameters shown:

- `host`: Set to "https://192.168.43.128:5601" (Kibana running on port 5601)
- `username`: "elastic"
- `password`: The elastic user password
- `ssl.verification_mode`: Set to `none` for self-signed certificates (not recommended for production)

This setup allows Winlogbeat to automatically load predefined dashboards into Kibana for visualizing Windows event logs

```
# ===== Kibana =====  
  
# Starting with Beats version 6.0.0, the dashboards are loaded  
# via the Kibana API.  
# This requires a Kibana endpoint configuration.  
setup.kibana:  
  
# Kibana Host  
# Scheme and port can be left out and will be set to the  
# default (http and 5601)  
# In case you specify an additional path, the scheme is  
# required: http://localhost:5601/path  
# IPv6 addresses should always be defined as:  
# https://[2001:db8::1]:5601  
#host: "localhost:5601"  
setup.kibana:  
  host: "https://192.168.43.128:5601"  
  username: "elastic"  
  password: "8Yqa+Cux4FPuf1VqcSlR"  
  ssl.verification_mode: none  
  
# Kibana Space ID  
# ID of the Kibana Space into which the dashboards should be  
# loaded. By default,  
# the Default Space will be used.
```

3. Winlogbeat event logs configuration

Configuring Windows Event Logs to Collect

The `winlogbeat.event_logs` section defines which Windows event logs Winlogbeat will monitor and collect.

```
# https://go.es.io/WinlogbeatConfig

winlogbeat.event_logs:
# - name: Application
#   ignore_older: 72h
# - name: System
- name: Security
  event_id: 4688,4624,4625,4720,1102
- name: Windows PowerShell
- name: Microsoft-Windows-PowerShell/Operational
# - name: Microsoft-Windows-Sysmon/Operational
# - name: Windows PowerShell
#   event_id: 400, 403, 600, 800
# - name: Microsoft-Windows-PowerShell/Operational
#   event_id: 4103, 4104, 4105, 4106
# - name: ForwardedEvents
#   tags: [forwarded]

# ===== Elasticsearch template settings =====
```

4.Verfvyng Winlogbeat is running:

5.Verifying Winlogbeat Data in Elasticsearch

After Winlogbeat is successfully running, you can verify that Windows event logs are being indexed into Elasticsearch using a `curl` command.

Command used:

bash

```
curl http://192.168.43.128:9200/winlogbeat-*/_search?pretty
```

Successful response shows:

- "total": 96 shards all successful
- "value": 10000 total hits (at least 10,000 events indexed)
- "relation": "gte" indicates there are more than 10,000 events

```
maram@maram: ~/Desktop
maram@maram:~/Desktop$ curl http://192.168.43.128:9200/winlogbeat-*/_search?pretty
{
  "took": 18,
  "timed_out": false,
  "_shards": {
    "total": 96,
    "successful": 96,
    "skipped": 0,
    "failed": 0
  },
  "hits": {
    "total": {
      "value": 10000,
      "relation": "gte"
    },
    "max_score": 1.0,
    "hits": [
      {
        "_index": ".ds-winlogbeat-9.2.1-2025.11.19-000001",
        "_id": "kwMnZoBv7Y2Pk5CrSoX",
        "score": 1.0,
        "_source": {
          "agent": {
            "name": "moro",
            "id": "176ff9a2-1df7-47b9-a938-a4b7dd132113",
            "type": "winlogbeat",
            "ephemeral_id": "bb2fb867-7562-45c0-8279-aa2497f8e8f8",
            "version": "9.2.1"
          },
          "process": {
            "name": "services.exe",
            "pid": 984,
